Subject: GC/MS Operator Responsibilities

Until the single chemist system goes into effect, GC/MS operators should only be setting up runs with samples they intend to analyze. Due to the shared responsibility that exists between the setup and confirmatory chemist, along with the logistical problems this shared responsibility creates, do not place samples on your run if others need to analyze them. Do not place your own samples on these runs either. Operators in need of additional GC/MS instrument time will be allowed to return the following week to finish any problem samples.
